Caig Labs Spray Can Products

<u>Item</u>	<u>List</u>
Caig Labs "De-Oxit-Gold" Spray (the ultimate spray for plated contacts, switches)	\$48.00
Caig Labs "De-Oxit D-5" Spray (good general workhorse spray)	\$34.00
Caig Labs "FaderLube" MCL Spray (treatment for pots & faders carbon/plastic)	\$34.00
Caig Labs "FaderLube" MCL Liquid (needle dispenser) (as above but 100%)	\$48.00

Application Notes :

"DeOxit-Gold" spray is the best spray for all switches and fine connectors, it is safe to use on all metals. Excellent when used on insert jacks, bantam jacks and signal switches. Most modern console switches have a breather hole where you can squirt a short burst of this spray. This product was formally called "ProGold"

"DeOxit D-5" spray is very good for general use on larger items such as XLR and 1/4" jack connectors. **Do not use on small switches or bantam jacks.** Not suited for use on some types of gold plated contacts as it may cause a dreaded "green gunk" to form.

"FaderLube" spray is designed for potentiometers and faders, it is the ultimate fader and pot track treatment. It treats the conductive track only and has no cleaning action. This product was formally called "Cailube"

After applying any of the above treatment sprays, fully operate the pot/switch/jack a few times to ensure that the spray is worked into the contacts while they are still wet. With all of the above, **use sparingly** for the best results.
